

# StarHex-14

*The beauty of polyform sets*

**Presentation by Kate Jones  
as 14-line sonnets  
at Gathering for Gardner 14  
Atlanta, GA – 2020/2021**

1.

Four decades of design and puzzle art  
Have filled my life and overjoyed my heart.  
I thank you all for treasuring my creations,  
We do have fans in many different nations,

Whence ever more inventors join our line:  
We publish their designs, too, not just mine.

From *Theo Geerinck*'s brilliant creative mind  
New polyforms — *his polystars* — we find.

Their stellar highlight, at this grand event,  
Is just the latest stage in their ascent.  
Dear Martin Gardner's writings were the gate  
Through which I found my fortune and my fate.

And by a lovely match of tiles and times  
The number fourteen has inspired these rhymes:

2.

The Cosmos spreads before us points of light,  
Each tiny dot a fire immensely far  
A galaxy of giants, dim or bright,  
A burst of energy we call a star.

Now let us model constellations fair  
With puzzle shapes that mimic starry skies,  
And let each star from none to six points share,  
No two alike, that fourteen figures rise.

They plot upon a classic field — behold  
How triangles and hexagons do spill  
An infinite array. A tale is told  
How polystars this symmetry will fill.

*A classic wallpaper pattern*

Now may their hues not touch, a solver's dream,

Or group each color as a single beam.

3.

Then let the puzzler build some pretty twins,  
Binary pairs or splendid symmetries

Where every shape a glorious orbit spins  
The eye and mind with mirror forms to please.

and more...

and more...

Now capture all your stars within a hive  
That only corners touch, a mighty feat,

Or join just thirteen so that stars arrive,  
2 points less, yet balance mirrored sweet.

This marvelous set in Kastellorizo earned  
The Archimedes prize for puzzle fame.

With Archimedes, too, a fourteen turned  
Into our awesomely historic game.

**Tricolor**  
**Stomachion**  
***The other***  
**14-piece**  
**puzzle!**

We celebrate today the old and new  
As polyforms define the good and true.

And its  
marvelous  
monograph

***Available only  
from Kadon***

## THE TRICOLOR STOMACHION

*A Monograph*

### A TASTY TALE

How three obscure amateurs pushed the frontier  
forward on a 2200-year-old puzzle first studied by  
Archimedes.

Kate Jones, Joe Marasco, and Alex Streif  
Kadon Enterprises, Inc.
